

# HCI - Planning Interview

## Questions Only

Luka Šveigl, ls6727@student.uni-lj.si, 63200301

Jan Šuklje, js1471@student.uni-lj.si, 63180292

Maks Popovič, mp4116@student.uni-lj.si, 63200224

October 2024

## 1. Functional Requirements

### 1.1 Managing Friends and Groups

1. How would you prefer to add friends in the app? Should there be options to add by username, email, or phone number?
2. What features would you expect when creating and managing groups (e.g., adding/removing members, setting group names)?
3. How should the app notify group members about updates (e.g., new members, issued loans, payments)?

### 1.2 Loan Issuing and Tracking

1. When issuing a loan, what details would you find necessary to include (e.g., amount, reason, due date)?
2. How would you prefer to split and track expenses among group members? Would you like automatic calculations or custom amounts?
3. What features would help you track repayments over time, and how often would you need reminders?

### 1.3 User Account & Profile

1. What information would you like to have in your profile (e.g., name, photo, email)?
2. Would you prefer to see a summary of your total loans and debts on your dashboard?

## **2. Non-functional Requirements**

### **2.1 Usability**

1. What types of visual elements or navigation options make an app easy to use for you?
2. Do you have any preferences for the layout or style of the app? (e.g., minimalist, colorful, icons-based)
3. Would in-app tips or tutorials be helpful, or would you prefer to explore on your own?

### **2.2 Performance**

1. How important is it to you that actions in the app, like loading groups or processing loans, happen instantly?

### **2.3 Reliability and Data Accuracy**

1. What concerns do you have about data accuracy in managing loans and group expenses?
2. How frequently would you want your data to sync or update (e.g., real-time, daily)?

### **2.4 Security and Privacy**

1. How would you feel about sharing personal information (like email or phone) with others in a group?
2. What security features (e.g., two-factor authentication, privacy settings) would make you feel safer using the app?
